(54) Title: ACCESSORY SYSTEM FOR VEHICLE

(57) **Abstract:** An accessory system for a vehicle includes an interior rearview mirror assembly (10) and a display screen (20) that is extendable and retractable relative to a casing. The display screen is slidably mounted at the casing and slidable in a direction generally parallel to a length axis of the reflective element between a non-use position, where the video display screen is positioned substantially within the casing, and a use position, where the video display screen is substantially extended from a side of the casing for viewing. The display screen may be automatically extended in response to an activating event. The accessory system may include an accessory module (50), which may comprise multiple sub-modules that may be selected to provide the desired accessory content to the accessory module.
